Locomotive

H43 High Friction Composition Brake Shoe

High quality, innovative Anchor Brake Shoe products include the **H43** – a high friction composition brake shoe for locomotive use designed to meet the needs of several Class I railroads.

Key Features

- **Side relief feature** reduces edge chipping resulting from excessive lateral movement in the brake rigging.
- **1:20 face taper** better matches the wheel tread profile of locomotive wheels.
- **Tapered ends combined with a high strength steel back** greatly reduce bent ends and delaminated end material by transferring the load at the end of the brake shoe directly to the end of the brake head.
- **Large face radii** allow a better initial fit with varying brake head wear conditions and a smoother wear-in period after installation.

Highest quality, superior service, competitive prices

You'll get the highest quality products at competitive prices from us at Anchor Brake Shoe Company, a fully accredited ISO 9001 and AAR M-1003 facility with vast expertise in railroad friction products. Your experience with Anchor will always be a positive one because we're dedicated to superior customer service. Call our knowledgeable staff at **630 293-1110** to help you select the right brake shoe for your application, and you'll understand just what we mean.
